

# KeyConnect

Install • Configure • Troubleshoot

During Subscriber installations, field technicians require an easy tool to reduce installation time and improve the network performance. KeyWest Networks Smart-Phone App provides different installer options to manage the new Subscriber installation

## Easy.

- ① **Power On**  
Open the App
- ② **Connect**  
Connect to 2.4GHz Radio
- ③ **Configure**  
Bring-up 5GHz Wireless link

### Key Features

- Secure Communication between App and 2.4 GHz radio
- Easy and Quick configuration for 5 GHz backhaul wireless link
- Upgrade Configuration Profiles and Firmware
- Simplified 5 GHz backhaul wireless link Alignment
- Real Time Performance Check
- Auto-generate Installation Report

## Summary

- Displays 5 GHz backhaul wireless link details like IP Address, System Name, MAC Address, GPS co-ordinates, SNR, Modulation Rate and throughput counters.

## Discovery

- Discovers 2.4 GHz wireless networks
- Connects to selected wireless network
- Establishes secure communication

## Configuration

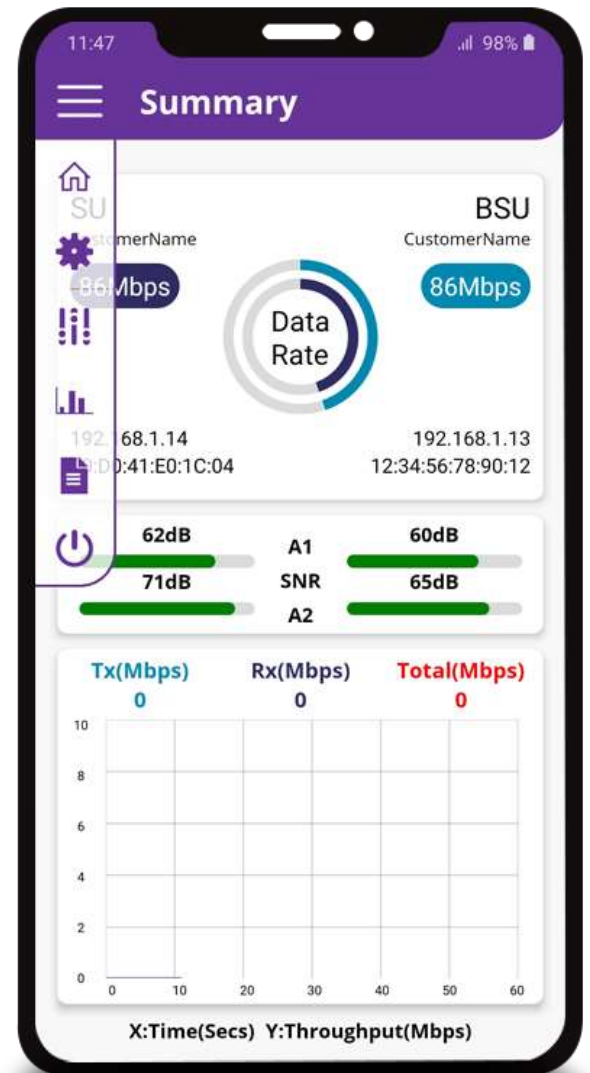

- 5 GHz backhaul wireless link configuration parameters can be configured by user. Primary configuration includes Radio Mode, Country Code, SSID, Channel bandwidth and Channel

## Alignment

- Displays real time SNR variation while aligning the antenna
- Displays the best SNR for each antenna port

## RF Link Test

- User can run RF link test tool after antenna alignment
- Displays real time SNR, Modulation Rate and throughput counters
